

Specifics: We skied slope

Wind Loading:

Wind: SW

50-49cm: Problematic layer

Notes: Localized wind effect, and drifts that were pencil hard and were sensitive to the weight of a skier, in areas along the NE ridge (from the ridge top to the ridge base). These areas did not appear to be widespread. One natural avalanche observed on an upper elevation east/NE aspect near the ridge top, left of the Fin. The avalanche appeared to have started from a cornice fall.

45.00N

Avalanche Details: The Fin Avalanche
