Skier triggered slab near Cooke

COOKE CITY Cooke City 2/20/2020 Code SS-AS-R2-D1.5-I Elevation 8000 Aspect S Latitude 45.02020 Longitude -109.93800 Notes

From email on 2/21/20: "...observed today from the highway. It appears like it was probably triggered by a skier yesterday (on Feb. 20). It was on a south a<u>aspect</u>around 8,000', and estimated to be 1-2' deep and about 30' wide.

Additionally, there were a couple of wet, point release avalanches that ran today on other southerly aspects, due to abundant sunshine and warming temps. Aside from that, no other sl<u>slab</u>valanche activity nor signs of instability observed this last week around Cooke City."
