

I K P 1F 4F F Notes: Could not find buried surface hoar in the burned area. Slight wind affect likely destroyed it. We found it further down the ridge towards Little Ell where it was very reactive (CT2 Q1). No collapsing or cracking. We found more surface hoar in a low angle meadow below the burn. Near the crystals were 2-4mm fx's and depth hoar and became just facets further up the snowpack.
