Snow Pit Profile
 Observer: Doug Chabot

 Saddle Peak
 Wed Feb 01 11:00:00 MST 2012

 Bridger, MT
 Co-ord: N W

 Elevation (ft)
 9000
 Slope: 37

 Aspect:
 90
 Wind loading: previous

 Specifics:We skied slope.
 Ski tracks on slope.

Stability on similar slopes: Fair Air Temperature: C Sky Cover: Clear Precipitation: None Wind: W Light Breeze HS140 Stability Test Notes: Layer note 0-40: Prob

I K P 1F 4F F 0 Notes: This was dug about 75 feet off the ridgecrest. Weak facets/depth hoar are not very strong. No load=no problem. The snowpack seems to have load and might continue to do so if the storms are small. Adjacent to the pit site the snow was only 40 cm deep (facets) and I worry that a colla initiate and propagate onto the slope.
