Stability Test Notes:

Layer note

65-70: Pro

0-40: icy, v

Specifics: Avalanche Pit: flank; Recent act on sim slopes. Recent act on diff slopes.

Notes: This slope avalanched naturally on Feb 3. I did not do any stability tests. It was difficult accessing the flanks because of the steep, rocky terrain. Avalanche averaged 3 feet deep, 800 feet vertical and 300 feet wide. Alpha angle is 27 degrees. N-D3-R3 -O. Photos and video on mtavalanche.com
