

Notes: Dug next to Chabot's pit from 12/23. See http://www.mtavalanche.com/images/12/frazier-ridge-profile?size=\_originalMain concern is nsf's. The of near surface facets is highly variable. Some slopes do not have them, but you will have to assume they exist. On Dec 23, Doug got ECTP21 a even ECTN today at this layer.
